

Benefits of Going Solar

Solar energy utilizes a renewable energy source – the sun – and provides many benefits for individuals and the community.

Provides Clean, Sustainable Energy

Electricity produced by solar panels improves environmental quality by decreasing the demand for fossil fuels and limiting greenhouse gas emissions. This, in turn, reduces air pollution - clean energy means cleaner air!

Saves You Money

Whether you are a homeowner, a renter, or a business owner, you know how expensive power bills can be. Going solar saves you money on energy costs as the price continues to drop from technological developments.

Supports Local Economy

Going solar supports Idaho solar companies and provides jobs for the community. And, all that money you saved on your power bill can be spent on other things, which also benefits the local economy!

Improves Grid Resilience

Adding electricity to the grid with solar panels improves electric grid resilience during peak demand times. This means utilities don't have to ramp up the power plants to meet consumer demand, which decreases stresses to the system.
